Octro Insurance Fund

The OIF serves as an insurance fund to achieve price stability and longterm sustainability of the Octro Protocol by maintaining a consistent 0.02394% rebase rate paid to all \$OCTRO token holders.

The Furnace

3% of all \$OCTRO traded are burnt in the Furnace. The more that is traded, the more get put into the fire causing the furnace to grow in size reducing the circulating supply and keeping the Octro protocol stable.

Auto-Compounding

The Furnace

How it Works

3% of all \$OCTRO traded are burnt in the Furnace. The more that is traded, the more get put into the fire causing the furnace to grow in size, larger and larger through self fulfilling Auto-Compounding, reducing the circulating supply and keeping the Octro protocol stable.

Burns Token Supply to

Octro Auto-Liquidity Engine

Every 48 hours our Octro Auto-Liquidity Engine (SALE) will inject automatic liquidity into the market.

The remaining 50% of OCTRO in the Auto-LP wallet will be used for the OCTRO side of liquidity, therefore giving equal an 50/50 weighting of OCTRO/BNB which will then be automatically added as new, additional liquidity into the market pair & raising amount of liquidity in the pool.

The SALE will do this every 48 hours by adding more and more liquidity to the pool which will allow \$OCTRO token holders to easily sell their tokens at anytime with little to no market slippage. It will also aid in maintaining protocol stability to make sure the APY is upheld for the entire life of Octro.

Automatic injection of liquidity from a hard- coded function every 48 hours!

No manual override ability to pause or stop liquidity from being added.

Allows for complete APY sustainability until maximum supply is reached.
